Conversation Insights

AI-Powered Analysis Platform

A simple guide to understanding and using the application

1. Dashboard Overview

The Dashboard is your main hub for accessing all features. It provides a quick summary of your conversation data.

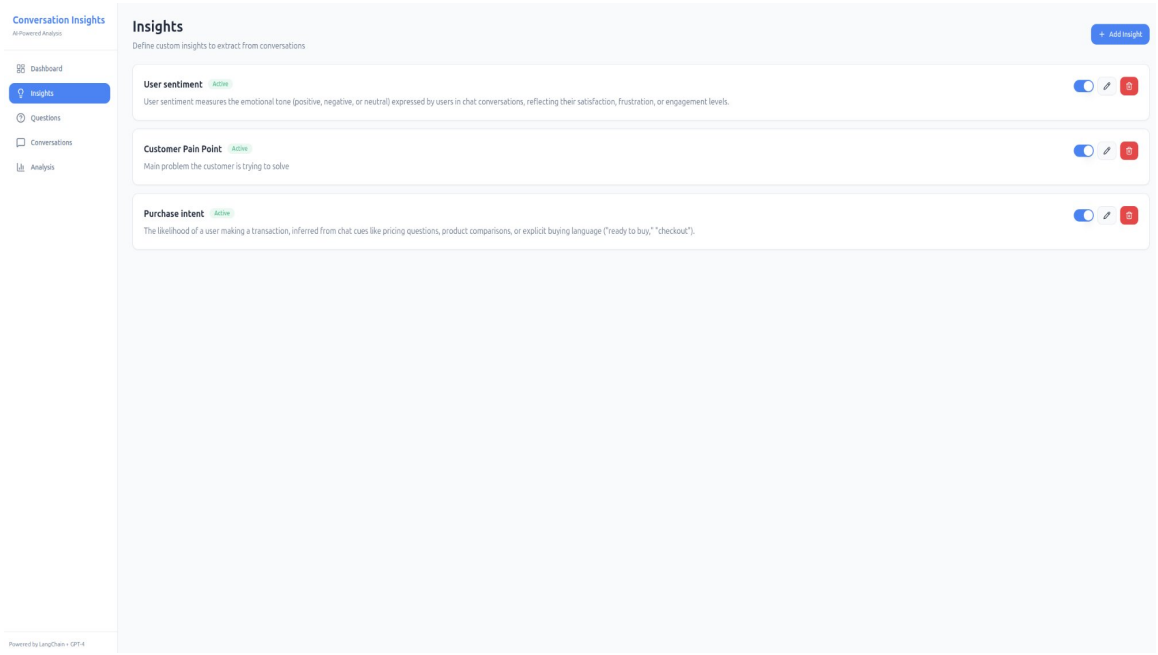

Key Metrics:

- **Conversations:** Total number of conversations tracked
- **Active Insights:** Number of insights currently being monitored
- **Active Questions:** Qualifying questions in use
- **Analyzed:** Conversations that have been processed

2. Insights

Insights are custom metrics you define to extract specific information from conversations. The platform includes pre-configured insights that help you understand your conversations better.

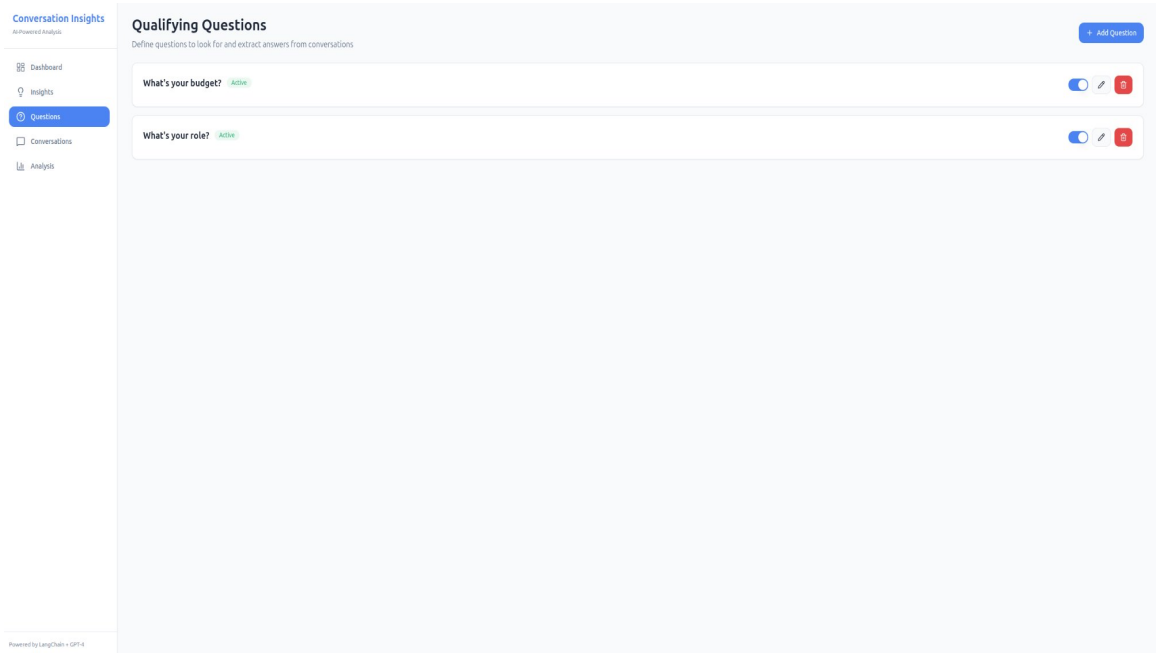

Available Insights:

- **User Sentiment:** Measures emotional tone (positive, negative, or neutral)
- **Customer Pain Point:** Identifies the main problem customers are trying to solve
- **Purchase Intent:** Assesses likelihood of making a transaction

Each insight can be toggled on/off, edited, or deleted using the controls on the right side.

3. Qualifying Questions

Define specific questions to ask and extract answers from your conversations. This helps you gather consistent information across all customer interactions.

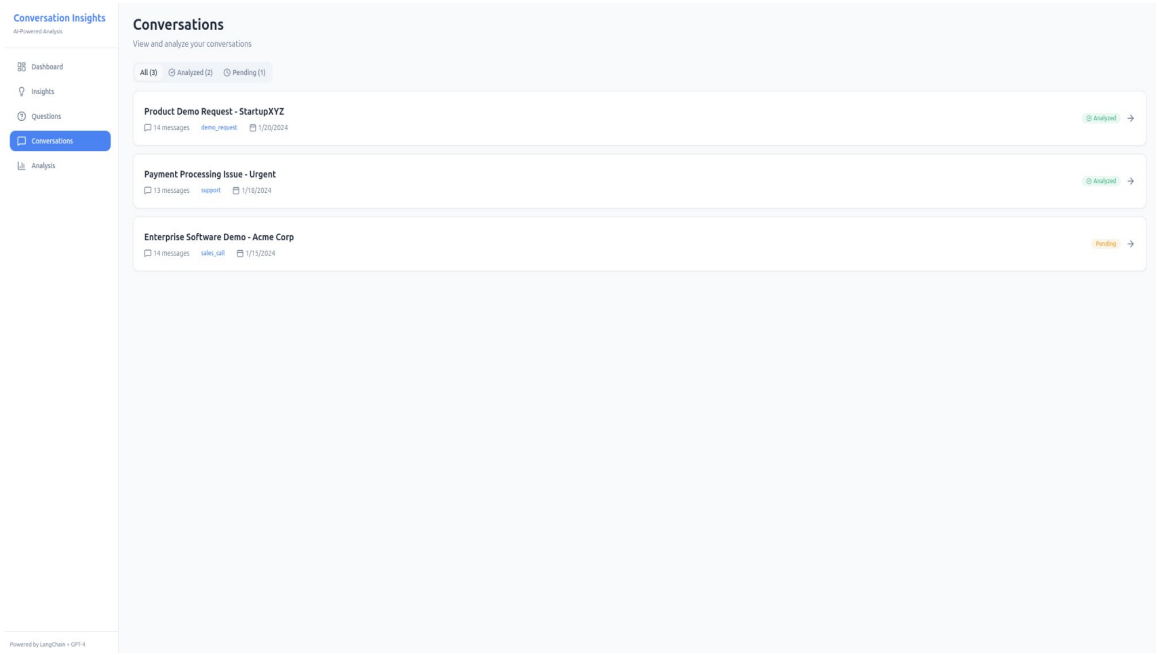

Example Questions:
• What's your budget?
• What's your role?

The system automatically extracts answers to these questions from conversation transcripts, making it easy to qualify leads and understand customer needs.

4. Conversations

View and manage all your conversations in one place. Filter by status (All, Analyzed, Pending) to focus on what matters most.

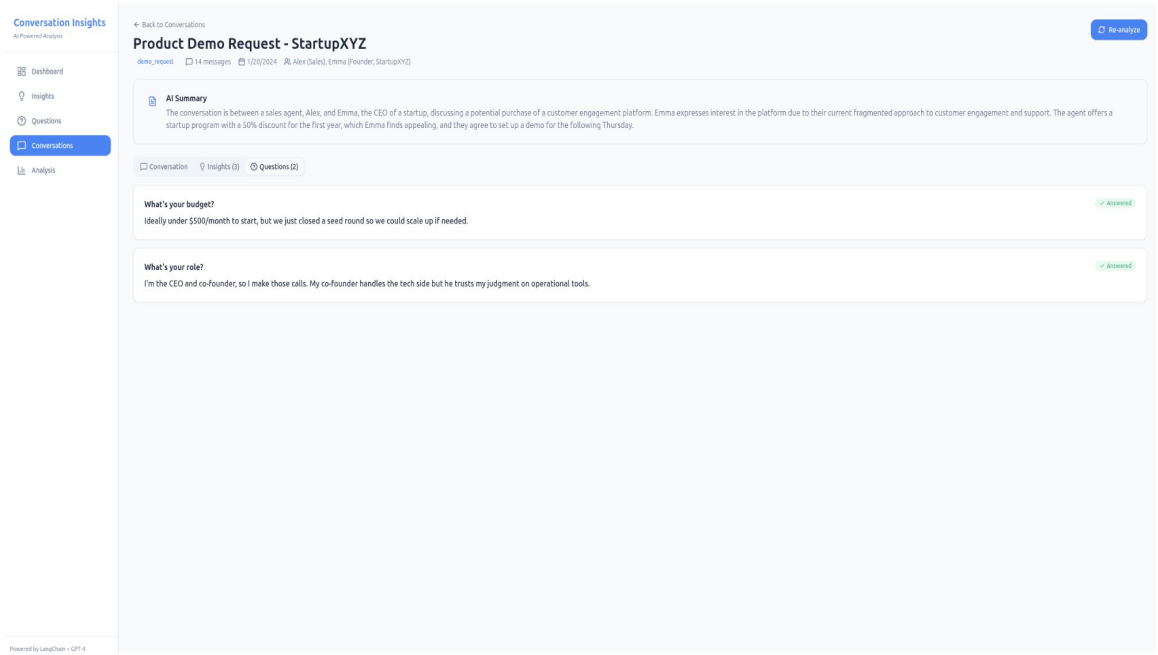

Each conversation shows:

- Title and participants
- Number of messages and conversation type
- Date and analysis status

5. Conversation Details - Questions

When you open a conversation, you can see the answers extracted for your qualifying questions.

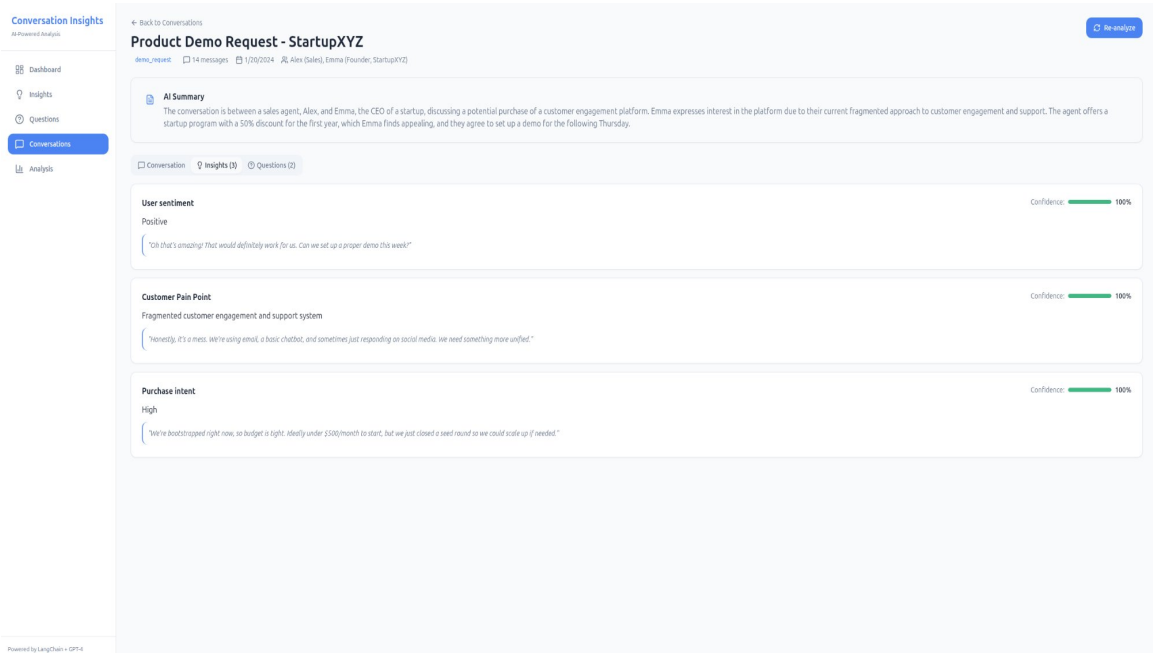

In this example, the system extracted:

- **Budget:** Under $500/month initially, but they closed a seed round
- **Role:** CEO and co-founder

6. Conversation Details - Insights

View the AI-generated insights for each conversation, complete with confidence scores and supporting quotes.

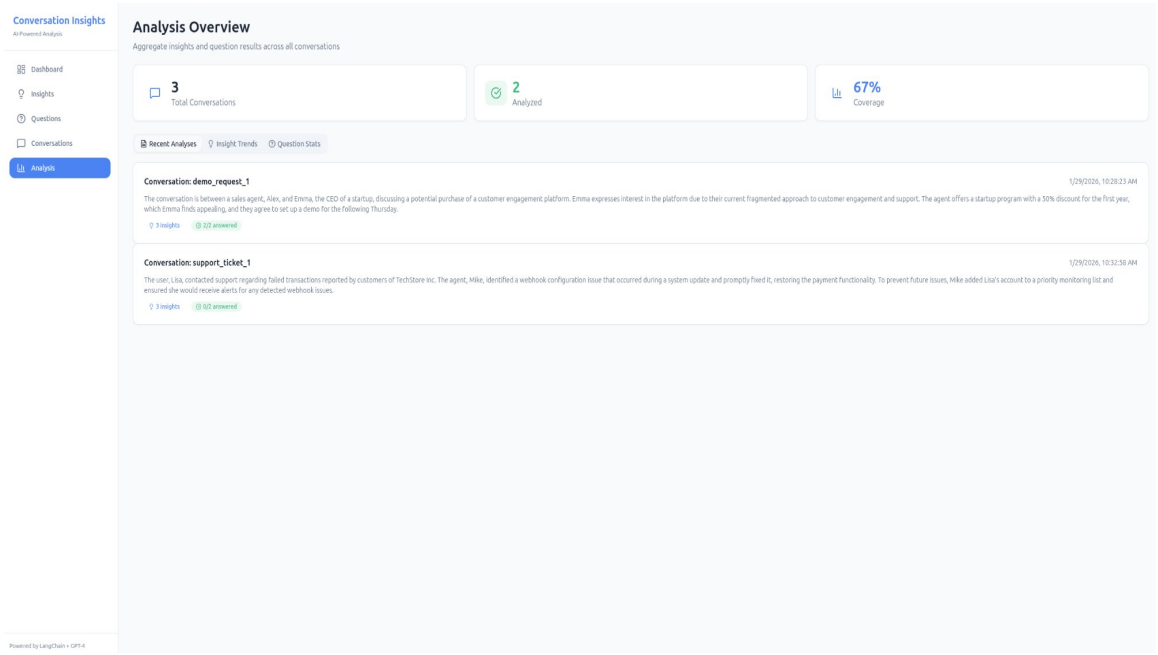

Insight Details:
- **User Sentiment:** Positive (100% confidence)
- **Customer Pain Point:** Fragmented customer engagement system
- **Purchase Intent:** High

Each insight includes a relevant quote from the conversation for context.

7. Analysis Overview

The Analysis section provides aggregate insights across all your conversations, helping you identify trends and patterns.

Key Features:

- Total conversations and coverage percentage
- Recent analysis results
- Trends and statistics across all conversations
- Question stats to see response patterns

This view helps you understand the bigger picture of your customer conversations and make data-driven decisions.

Getting Started

To start using Conversation Insights effectively:

1. **Configure Insights:** Set up the insights that matter to your business
2. **Add Questions:** Define qualifying questions to extract key information
3. **Upload Conversations:** Import your conversation data
4. **Review Results:** Analyze individual conversations and aggregate trends
5. **Take Action:** Use the insights to improve your customer engagement
